Non-Invasive, Radiation-Free Health Assessment

What is a Thermography Assessment?

Medical thermography provides a non-invasive, comprehensive evaluation of inflammation levels in your body—one of the most crucial indicators of overall health. Using infrared imaging, we can detect:

- Inflammation, congestion, and injury
- Hidden sources of illness (dental issues, musculoskeletal imbalances, toxins/pathogens, and emotional stress)
- Functional changes in your body before symptoms appear, helping create a proactive, targeted wellness plan.

What's Included?

- ✓ Imaging appointment (30-60 minutes, depending on the study)
- ✓ In-depth written health assessment explaining thermal patterns, key areas of concern, and recommended next steps
- ✓ Follow-up consultation with our clinic director and thermography expert
- ✓ Ongoing monitoring to track health improvements and the effectiveness of treatment plans

Thermography Pricing

◆ Full Body Study - \$575 (Recommended)
